

WELCOME ON SciencePage

SciencePage - short scientific publications for development and improvement...

Discover materials from a wide variety of scientific fields.

Join us and connect with scientists from around the world, exchange ideas and get inspired.

Find answers to the toughest scientific questions.

Enrich your knowledge and improve yourself with the help of our resources and articles.

Here you can ask questions and get help with all aspects of publishing your research papers.

We help young scientists start their careers and take their first step into the world of science.

Structure of a biological neuron

A biological neural network is composed of a group of chemically connected or functionally associated neurons. A single neuron may be connected to many other neurons and the total number of neurons and connections in a network may be extensive. Connections, called synapses, are usually formed from axons to dendrites, though dendrodendritic synapses and other connections are possible. Apart from electrical signalling, there are other forms of signalling that arise from neurotransmitter diffusion.

Artificial intelligence, cognitive modelling, and artificial neural networks are information processing paradigms inspired by how biological neural systems process data. Artificial intelligence and cognitive modelling try to simulate some properties of biological neural networks. In the artificial intelligence field, artificial neural networks have been applied successfully to speech recognition, image analysis and adaptive control, in order to construct software agents (in computer and video games) or autonomous robots.

Neural network theory has served to identify better how the neurons in the brain function and provide the basis for efforts to create artificial intelligence.

- Multivariate Normal Distribution** - ALEXANDER KATZ, XU TAO, HENRY MALTBY.
A MULTIVARIATE NORMAL DISTRIBUTION IS A VECTOR IN MULTIPLE NORMALLY DISTRIBUTED VARIABLES, SUCH THAT ANY LINEAR COMBINATION OF THE VARIABLES IS ALSO NORMALLY DISTRIBUTED. IT IS MOSTLY USEFUL IN EXTENDING THE CENTRAL LIMIT THEOREM TO MULTIPLE VARIABLES, BUT ALSO HAS APPLICATIONS TO BAYESIAN INFERENCE
